

Partnering for Vaccine Equity with National Organizations

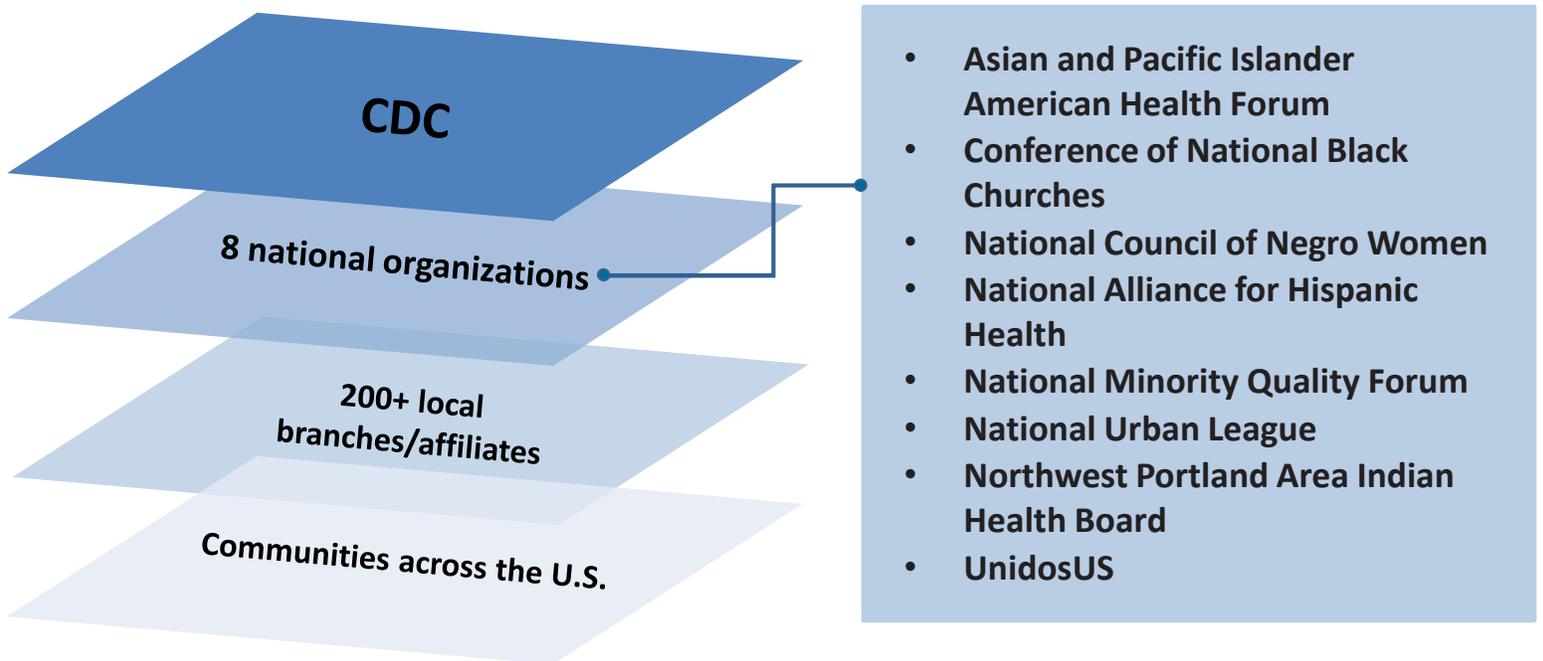

National Partners Form a Powerful Network to Reduce Immunization Disparities and Increase Community-Level Engagement

Through the *Partnering for Vaccine Equity* program, CDC allocated **\$62.7M (fiscal year 21-22)** to **eight national organizations with longstanding ties with specific communities** to enact sustainable change for communities of color experiencing immunization inequities.

Since 2021, these organizations have **implemented vaccination activities, deployed educational campaigns, and equipped influential messengers in their local branches/affiliates** to engage communities experiencing immunization inequities. To support these efforts, CDC provides national partners access to a learning community with other partners, data insights on key health and demographic data, and a repository of vaccine promotion and educational resources.

National Organizations Engage Communities through Over 200 Local Affiliates

181

Nationwide educational campaigns launched

46

States reached through tailored educational campaigns, including Washington, D.C.

43

Educational campaign languages and dialects, such as Arabic, Hawaiian, Indonesian, and Swahili

Centers for Disease Control and Prevention
National Center for Immunization and Respiratory Diseases

National Organizations are funded by CDC-RFA-IP21-2106
