Subject: 059 - Nanotechnology Comments on Exposure Assessment and Characterization

Comments:

I am the EHS Manager for a paper company who has embarked on coating paper substrate with nanoscale material, about 100 to 300 nms. Since there is no real exposure data to nanoscale fibers, I would like to ask what your opinion, at what level of exposure is safe or what measurement of exposure can be considered in regard to PEL.

Thank you

Glen Woooley
