**Comments**

I work for a facility that uses a lot of the medications that are marked to be added to the hazardous drug list. We have individuals that can not take these medication whole due to dysphagia. Some also have to be melted or crushed to be given through a gastric tube. Tegretol is one of the main ones that we use. Can you please tell me what is the specific reason to be added to this list? Thank you  
Dorothy"eileen' Rogers
