Data Brief 463. Emergency Department Visits With Suicidal Ideation: United States, 2016-2020

## Data table for Figure 1. Rate of emergency department visits with suicidal ideation, by age group: United States, 2016–2020 $\,$

Age group (years)	Visits per 10,000 people per year	Standard error	95% confidence interval
Total	40	2.5	35.1–44.9
0–13	15	3.6	7.9-22.1
14–18	91	13.4	64.7-117.3
19–24	74	12.6	49.2-98.8
25–34	61	6.4	48.5-73.5
35–44	67	7.6	52.1-81.9
45–54	33	4.7	23.8-42.2
55 and over		1.9	12.2–19.8

NOTES: Visits are based on a sample of 860 emergency department visits made by patients during 2016–2020, representing an annual average of about 1.3 million emergency department visits. Visit rates are based on estimates of the U.S. civilian noninstitutionalized population for July 1, 2016–2020, as developed by the U.S. Census Bureau's Population Division. SOURCE: National Center for Health Statistics, National Hospital Ambulatory Medical Care Survey, 2016–2020.

Data table for Figure 2. Rate of emergency department visits with suicidal ideation, by sex and age group: United States, 2016-2020

Sex and age group (years)	Visits per 10,000 people per year	Standard error	95% confidence interval
Female			
Total	34	2.8	28.5-39.5
0–13	16	4.3	7.6-24.4
14–18	128	23.2	82.5-173.5
19–24	78	15.0	48.6-107.4
25–34	45	7.3	30.7-59.3
35–44	38	6.7	24.9-51.1
45–54	27	4.4	18.4-35.6
55 and over	11	2.3	6.5–15.5
Male			
Total	46	3.7	38.7-53.3
0–13	*	*	*
14–18	55	12.2	31.1-78.9
19–24		19.9	32.0-110.0
25–34		9.7	58.0-96.0
35–44	97	13.3	70.9-123.1
45–54	40	8.6	23.1-56.9
55 and over	21	3.4	14.3-27.7

<sup>\*</sup> Estimate does not meet National Center for Health Statistics standards of reliability. Estimates are not presented if they are

based on fewer than 30 cases in the sample data.

NOTES: Visits are based on a sample of 860 emergency department visits made by patients during 2016–2020, representing an annual average of about 1.3 million emergency department visits. Visit rates are based on estimates of the U.S. civilian noninstitutionalized population for July 1, 2016–2020, as developed by the U.S. Census Bureau's Population Division.

## Data table for Figure 3. Rate of emergency department visits with suicidal ideation, by race and ethnicity: United States, 2016-2020

Race and ethnicity	Visits per 10,000 people per year	Standard error	95% confidence interval
Total	40	2.5	35.1–44.9
Hispanic or Latino	25	4.0	17.2–32.8
African American	68	7.9	52.5-83.5
Non-Hispanic White	42	2.9	36.3-47.7
Non-Hispanic other races	19	4.4	10.4–27.6

NOTES: Visits are based on a sample of 860 emergency department visits made by patients during 2016–2020, representing an annual average of about 1.3 million emergency department visits. Visit rates are based on estimates of the U.S. civilian noninstitutionalized population for July 1, 2016–2020, as developed by the U.S. Census Bureau's Population Division. Non-Hispanic other races includes Asian, Native Hawaiian or Other Pacific Islander, and American Indian or Alaska Native people, and people of two or more races.

## Data table for Figure 4. Rate of emergency department visits with suicidal ideation, by region: United States, 2016–2020

Region	Visits per 10,000 people per year	Standard error	95% confidence interval
Total	40	2.5	35.1–44.9
Northeast	26	3.8	18.6-33.4
South	38	4.5	29.2-46.8
Midwest	46	5.9	34.4-57.6
West	47	5.2	36.8–57.2

NOTES: Visits are based on a sample of 860 emergency department visits made by patients during 2016–2020, representing an annual average of about 1.3 million emergency department visits. Visit rates are based on estimates of the U.S. civilian noninstitutionalized population for July 1, 2016–2020, as developed by the U.S. Census Bureau's Population Division.
