## **GET INFORMED**

Make the right choice for you.

## **Frequently Asked Questions**

- Can I take PrEP during pregnancy or while breast/chestfeeding?
- If you are considering getting pregnant, talk to your health care provider about PrEP if you're not already taking it. PrEP may be an option to help protect you and your baby from getting HIV before or during pregnancy or while breast/chestfeeding.
- Can I take PrEP while on hormone therapy?
- If you are worried that PrEP will affect your hormone therapy, ask your health care provider to check your hormone levels. There are no known drug conflicts between PrEP and hormone therapy, and there is no reason why the drugs cannot be taken at the same time. People who use PrEP should see their health care provider regularly for follow up HIV tests, shots, or prescription refills. Some of these visits may be able to be combined with your hormone therapy appointments.
- Are there any side effects to PrEP?
- Some people in clinical studies of PrEP had early side effects such as an upset stomach or loss of appetite, but these were mild and usually went away in the first month. Some people also had a mild headache. No serious side effects were observed. You should tell your health care provider if these or other symptoms become severe or do not go away.
