Technical Packages for Violence Prevention

The Centers for Disease Control and Prevention (CDC) has developed technical packages to help states and communities take advantage of the best available evidence to prevent or reduce violence.

A technical package is a collection of strategies that represent the best available evidence to help stop violence before it starts. They can help improve the health and well-being of communities.

There are five technical packages to support your violence prevention efforts. Each focuses on one violence type:
- Child Abuse and Neglect
- Intimate Partner Violence
- Sexual Violence
- Suicide
- Youth Violence

Download the technical packages today.

Violence Prevention in
PRACTICE

Violence Prevention in Practice is a web resource designed to help state and local health agencies and other stakeholders elect and implement the strategies in CDC's technical packages.

It is organized into sections that focus on:

- Planning
- Partnerships
- Policy
- Selecting Strategies
- Adaptation
- Implementation
- Evaluation

Take action to prevent violence today.
